

OCEAN - X - LONGLINES

THE PROPERTIES OF DIFFERENT FISKEVEGN OCEAN-X LINES ARE TUNED FOR OPTIMUM RETURN ON INVESTMENT.

Optimal longline design requires a balancing of key properties, whilst making as few compromises as possible. We also take into account that rope properties change over time.

Fiskevegn lines are designed for maximum life-span, minimal risk of losing catch, and the best possible coiling properties.

Users that buy longlines only for ease of coiling of brand-new lines, whilst forgetting that such lines may (1) grow stiffer as they age; (2) have inferior breaking load; and (3) have poor abrasion properties, may experience short-lived benefits and excessive consumption of lines.

PROPERTIES

Build	4-strand laid rope
Fibre	Silver (Polyester-Danline mix)
Elongation	~18% at break
Melting point	130°C
Spacing	1.1m to 1.5m. Special spacings upon request
Treatments	Tar or environment-friendly polyethylene
Lenghts	180 and 270 meters
IW option	Intgrated separate product sheet. See separate product sheet

DIAMETER (MM)	BREAKING LOAD (KG)
6	630
7	850
9	1400
9,5	1560
10	1900
11,5	2150
12	2300
